(a) Desired phase response
Phase (degrees)
Smooth interpolated target
Requested phase (uncapped)
Selected spectral peaks
Frequency (Hz, logarithmic)
(b) Synthesized finite FIR impulse response
Support relative to centre (ms): −25 to +25
Actual PhaseEngine::impulse() coefficients
25 ms centre
Coefficient
Causal kernel time (ms)
(c) Realized versus ideal frequency response
Phase (degrees)
Ideal requested phase
Measured FIR phase (centre delay removed)
Measured FIR magnitude deviation
Ideal magnitude: 0 dB
Deviation (dB)
Sampled max |phase error| 3.165°; max |magnitude deviation| 0.447 dB
Frequency (Hz, logarithmic)
